data loggers

Milano
ITALY

LSI LASTEM s.r.l

40 years of experience in environmental technology

Since 1972, LSI LASTEM Srl of Milano (Italy) develops, manufactures and delivers worldwide the most complete range of high quality environmental monitoring systems. LSI LASTEM instruments suits virtually any type of application, guaranteeing accurate and reliable measurement of environmental parameters both for portable and long term monitoring, outdoors and indoors. Our comprehensive range of products includes sensors, data acquisition systems, software and installation Accessories.

► Products

Instrumentation for indoor and outdoor environmental monitoring applications

LSI Lastem catalogue features one of the most complete ranges of instruments available on the market. We supply our products as complete, turn-key solutions or as components for third-party integration.

► METEOROLOGICAL SENSORS

Our broad range of sensors covers virtually any meteorological parameter, including wind, temperature, relative humidity, solar radiation, rain, atmospheric pressure, evaporation, visibility and more.

► INDOORS SENSORS

A full set of sensors for high-end indoors monitoring applications including solutions for temperature, relative humidity, air speed, light, radiative quantities, pressure, gas concentration and more.

► DATA LOGGERS and SOFTWARE

A complete range of data loggers for environmental applications, featuring low power consumption, protection against severe environmental conditions and extensive set of signal supported and communication protocols.

▶ Systems

LSI Lastem knowledge and expertise, the result of 40 years of business in the environmental market, has helped customers put together an incredible number of application-specific monitoring solutions.

▶ INDOORS APPLICATIONS

▶ Indoor Environmental Quality

Since his inception, indoor environmental assessment has been LSI Lastem's core business. Over the years, we implemented the most complete range of systems to measure the critical quantities defining health and comfort of building occupants.

▶ Heat stress and thermal comfort

State-of-the-art systems for the measurement of thermal comfort and heat/cold stress in health and safety applications according to relevant ISO standards. Over the years this application has become a true LSI Lastem's specialty.

▶ HVAC

Complete solutions for thermal comfort and indoor air quality monitoring in order to regulate HVAC (Heating, Ventilation Air Conditioning) systems performances and attain a better thermal sensation with optimal energy expenditures.

▶ Buildings assessment/Wall insulation

Complete systems for testing building environmental performances as function of energy saving capacity and related environmental comfort (Green Building Rating Tools) - including wall thermal transmittance, thermal comfort, indoor air quality and ventilation, light controls.

▶ Controlled Atmosphere Processing Environments

Monitoring of ambient temperature, relative humidity, air speed, pressure, IAQ and other parameters relevant for optimal storing and processing purposes in clean rooms, white chambers, laboratories, warehouses, caves and green houses.

▶ Museums and heritage

Practicing on Italy's immense cultural and artistic heritage and in cooperation with the most renowned restoration institutes, LSI Lastem has implemented monitoring solutions for the critical environmental and chemical parameters affecting conservation of artworks in museums, archeological sites and natural caves.

▼ ENVIRONMENT AND POLLUTION

▶ **Air Quality Monitoring**

Meteorological measurements for the analysis of the atmosphere dynamics and data correlation for air quality networks, stack emissions and gas analyzers systems.

▶ **Landfills and waste plants monitoring**

Monitoring of meteorological parameters in environmental-hazardous plants such as landfills and waste treatment plants. Solutions for odours dynamics, rain quantity and deepwater level&quality.

▶ **Compost and biofilters**

Systems to monitor the compost maturation process and bio-filtration activity. We provide solutions for temperature, oxygen and water content monitoring, for on-line (wireless or cabled) and portable applications.

▼ METEOROLOGICAL APPLICATIONS

▶ **AWS and Synoptic Meteorological systems**

Complete surface weather observation systems according to WMO standards for general or specific meteorological observations, operating individually or in networks.

▶ **Road and transportation monitoring systems**

Meteorological measurements systems for roads, railroads, seaports and airports—including specific parameters such as wind, visibility, precipitation intensity and type, road-surface conditions and present weather.

▶ **Hydrology systems**

Meteorological systems to control water both as a resource and as a hazard in hydrological networks and water-basin management – including measures of rain intensity, level and quality of water and snow.

▶ **Agrometeorology**

Climate is the single most important factor for crops growth and health. We offer a complete range of application-specific monitoring for leaf wetness, evapotranspiration, soil water content and photosynthetic-active radiation.

▶ **Wind energy**

From site assessment to wind turbine control, our complete meteorological catalogue with its full range of anemometers and data logger, gives wind energy professionals one of the most complete arrays of solutions available on the market.

▶ **Solar energy**

As Italy evolved into a premium solar energy market, we became the preferred choice for plant owners, EPC contractors and monitoring systems producers as we developed a unique knowledge of the application to go along with our meteorological and radiometric know-how.

▶ The LSI LASTEM Story

40 years of experience in environmental technology

www.lsi-lastem.com

LSI
LABORATORI
DI STRUMENTAZIONE
INDUSTRIALE S.p.A.

◀ **1972** - Laboratori di Strumentazione Industriale (LSI) Spa is organized in Milano by former members of a previously existing electronic research company (LRE) and begins the production of electrical thermometers. Soon afterwards, the company adds systems to measure relative humidity through the psychrometric method and hot-wire anemometers to his portfolio.

◀ **1975** - The company introduces graphic recorders for the online printing of the measured values and a line of converters for the connection of sensors to industrial systems. In just a short time, the range of products and measured quantities is remarkably increased with the introduction of sensors for the measurement of different types of temperature radiant, contact and of liquids, along with luxmetric sensors and hygrometers.

LASTEM

◀ **1979** - Introducing the LASTEM logo, the company begins the production and distribution of his line of sensors and data acquisition systems specific for meteorological applications. LASTEM Srl is now operative.

◀ **1980** - LSI is the first company in Italy to produce instruments for the measurement and storage of the thermal environments parameters requested in the health and safety regulations in working environments.

◀ **1985** - LSI and LASTEM transfer their head offices from Viale Liguria (Milan) to the current Settala (MI) headquarters, consisting in three twin buildings.

1990 - After the consolidation of computer technology and storage possibilities, LSI develops a series of PC-compatible acquisition systems and software.

◀ **1995** - A new concept of measurement is then started: multi-measurement system - one single system able to measure not just a few parameters, but a whole range of quantities which, altogether, can solve a specific application need. The multi-measurement concept has been a company mainstay since, widening the range of sensors for the measurement of environmental quantities such as gas concentration, thermic flows, lux and radiation.

◀ **2000** - LSI further develops its range, with a new sensor line equipped with data transmission via radio to data acquisition systems.

2004 - Aiming at offering a more complete range of services and better quality standards to his clients, LSI creates the new "After-Sale Services" division, designed to offer support and service after the purchase of the instruments: Telephonic Assistance, Data Collection, Repair Service and External Assistance.

◀ **2006** - LSI and LASTEM are united under the same brand and logo, with the new LSI LASTEM name.

2010 - A new concept of multi-position measurement is started: thanks to radio technology applied to data loggers and sensors, the multi-measurement concept is extended to a multi-position concept. Now LSI Lastem can develop complex systems producing simultaneous measurement of a number of parameters in different positions of the targeted environment.

photo | 3 twin-building structure

LSI LASTEM headquarters in Settala, near Milano, Italy is a 1325 m², 3 twin-building structure that's been home to our company since 1985. Here, a team of 30 professionals is employed in engineering, production, aftersales, marketing and administration departments.

R&D

Each and every LSI Lastem product is designed, developed and tested here. Our skill set includes physics, mechanics, electronics, firmware and software engineering.

Mechanical Shop

The backbone of LSI Lastem products takes shape in our in-house shop. Our expert craftsmen produce here sensor bodies, supports and mechanical components.

Sensors assembly division

Given our extensive range of sensors, this is always one of the busiest areas of the company. After completion, sensors are moved in the nearby calibration laboratories for testing.

Data Loggers Assembly division

Data Loggers are the absolute core of our systems. Here they are assembled, configured and tested – the latter activity lasts for a 7-day period.

▶ **Calibration Laboratories**

To ensure consistent and dependable performance, we calibrate each sensor against traceable standards in a specific calibration facility. Our laboratory is accredited by ACCREDIA Italian Accreditation System, the National Body for accreditation activities, equivalent to ISO/IEC 17025.

▶ **Aftersales**

We have a skilled, dedicated team for aftersales services. Their duties include repairs, calibrations, on-site installations and maintenance. In addition, we perform data management services to our customer - data download, validation and web publication.

▶ **Training**

We have always believed in the benefit of offering training for our customers to make the use of our system more productive and easier. That's why we have a dedicated room for our year-round training seminars.

Heat Shield

Portable wireless WBGT meter

Highlights

- Quick, real-time, reliable and accurate assessment of indoor and outdoor WBGT index
- Real-time assessment of the PMV-PPD index (ISO7730)
- Verification probe for assessment of the system calibration
- Built-in radio technology for simultaneous, wireless monitoring in different locations/heights
- Rated IP54 to withstand harsh environmental conditions
- 8MB memory for extended data logging
- Battery Life: 200h (with radio on 20h)
- Automatic start/stop of measurements
- Probe design and performances according to ISO7726
- GIDAS TEA The most advanced software available on the market for Thermal Environment Analysis
- Support for ISO7730 thermal comfort analysis with PMV and PPD indexes, heat and cold stress Predicted Heat Strain (PHS), Insulation Required (IREQ)

Heat Shield includes globe temperature, wet bulb temperature the, dry bulb temperature and relative humidity and displays on-line WBGT indoor& outdoor index, Heat Index and Humidex. Furthermore, if one anemometer is connected, Heat Shield can calculate directly the PMV-PPD comfort index (ISO7730). Thanks to its built-in radio technology, Heat Shield can support up to two satellite units to calculate WBGT at different levels (As per the recommendations outlined in ISO 7243: 1989) or in different locations. When equipped with the anemometer, the unit can be also used for accurate thermal environments analysis thanks to the most advanced software available on the market for this purpose, GIDAS TEA. Using software, the user can calculate additional ISO indexes for thermal comfort – Predicted Mean Vote (PMV), Predicted Percent of Dissatisfied (PPD) – or heat and cold stress - Predicted Heat Strain (PHS), Insulation Required (IREQ), Duration Limit of the exposition (Dlim). The software will also allow in-depth analysis of WBGT, PMV and PPD and creation of reports. For more information about Heat Shield, see LSI LASTEM catalogue MW9002-ENG.

▶ Main Features

Measurements

Heat Shield is equipped with built-in sensors to measure globe temperature (tg), wet bulb temperature (tnw), dry bulb temperature (ta) and relative humidity (rh). All sensors are designed in compliance with ISO7726. Heat Shield supports both 15 cm (6") and 5 cm (2") black globes thermometers as well as external anemometers for air speed (va) measurement.

Tg sensor,
5 cm (2")
diameter

Tg sensor,
15 cm (6")
diameter

Ta&RH%
sensor

Tnw sensor

ESV125 Va
sensor
(hot wire)

DNA205 Va
sensor (cups)

continued

Hot wire technology offers optimal performances indoors and in low air speed conditions, while a cup anemometer is ideal for outdoor use.

Calculations

Heat Shield calculates on-line and displays the following indexes:

- WBGT indoor&outdoor index (ISO7243). For up to 3 locations simultaneously it requires Satellite units.
- Head-Torso-Ankle Weighted Average WBGT (ISO7243) (requires Satellite units)
- Heat index According to 1990 National Weather Service (NWS) Technical Attachment (SR 90-23)
- Humidex According to J.M. Masterton and F.A. Richardson of Canada's Atmospheric Environment Service equation (1979)
- PMV-PPD (ISO7730) comfort index. Only whenever one anemometer sensor is connected. Metabolism (Met), Cloth (Clo) and Mechanical ratio (ETA) values are required for the subject under evaluation.

Heat Shield has 8 Mb memory to store measurements and calculations performed during every survey. Once data are downloaded to a PC, LSI Lastem suggests two software applications: Using GIDAS TEA will be possible perform easy and quick creation of reports based on any available ISO index:

- PMV-PPD index, TO Operative Temperature index (ISO7730) (requires BSZ313 PC module)
- PHS Predicted Heat Strain (ISO7933) (requires BSZ317 PC module)
- IREQ Insulation Required, Duration Limit of the exposition (ISO11079) (requires BSZ313 PC module)

Using HS Manager will be possible to perform analysis of the results of Heat Shield and to evaluate working limits. HS Manager always comes together with Heat Shield units. GIDAS TEA is an optional program. Read more about it in the LSI-LASTEM's Software catalogue (MW9006).

Verification probe

Using the high accuracy temperature probe connected to Heat Shield, it is possible to assess the measurement differences between this reference sensor and the three temperature sensors (Ta, Tg, Tnw) values. This operation can be done before each measurement. The three-integrated sensors of Heat Shield are easily replaceable by the operator using spare sensors.

Three levels WBGT on the same vertical

WBGT in three positions of the same environment

Easy to operate

Heat Shield is very stable when placed on any horizontal surface but it can be also hand able or mounted on standard photographic tripod. With its on-and-play philosophy, measurements can be displayed in just a few instants from power on. No configuration is required by PC. Rechargeable batteries assure up to 200 hrs of measurement (20 hrs when using wireless Satellites).

Three WBGT with wireless satellite modules

Heat Shield can be supplied as a single base unit or with two additional wireless satellite modules. The satellite units are used to measure environmental conditions at three levels and calculate Head-Torso-Ankle Weighted Average WBGT as required by the ISO 7243. Alternatively, the satellite modules can be used in different locations, performing three simultaneous measurements saving the user precious working time. Heat Shield radio can cover up to 300 m (line-of-sight; actual range in indoors conditions may vary).

Rugged and reliable

Heat Shield is extremely compact and robust. It has been designed to withstand the harsh working environments where heat stress condition normally arise both in indoor and outdoor conditions. Due to its metal case, it is very well protected against mechanical shocks, dust and dew. IP54 protection guarantees performance in outdoors or in dusty and humid conditions.

Sales Kit

Heat Shield - Portable wireless WBGT meter

◀ KIT 1.0: Base WBGT kit

- Includes:
- Heat Shield base module, complete with 110-220 Vac power charger, PC serial cable, USB adapter, HS Manager software and carrying case

◀ KIT 1.1: WBGT + Thermal comfort kit

- Includes:
- Heat Shield base module, complete with 110-220 Vac power charger, PC serial cable, USB adapter, HS Manager software, supports and carrying case
 - Hot wire anemometer

◀ KIT 1.2: Full three levels WBGT kit

- Includes:
- Heat Shield base module, complete with 110-220 Vac power charger, PC serial cable, USB adapter, HS Manager software and carrying cases
 - N.2 wireless satellite modules.
 - Tripod
 - Pole for fixing the system to three levels
 - Carrying bag for tripod and pole

Code	Description	KIT 1.0	KIT 1.1	KIT 1.2

Verification probe				
EST100	Temperature sensor for the assessment of the measurement differences between the three temperature sensors (Ta, Tg, Tnw) values coming from Heat Shield modules and the reference sensor measurement. Complete with ACCREDIA certificate of calibration.	Opt.	Opt.	Opt.
GIDAS TEA modules				
BSZ317	TEA module for hot environments. PHS index calculation. Calculator	Note 5	Note 5	Note 5
BSZ313	TEA module for comfort environments. PMV-PPD index calculation. Calculator			
BSZ315	TEA module for cold environments. ITR index calculation. Calculator			

Note 1 Check your country policy and legislation to select the appropriate globe diameter.

Note 2 Normally tripod can use useful for three levels WBGT measurement. In that case, BVA326 pole is also needed to fix one of the two satellites to the correct highness. Second satellite module is placed on the floor to obtain the measurement at 10 cm highness as required by the ISO7243 standard. Heat Shield base module is fixed to the tripod together with the ESV125 anemometer using the BVA325 arm.

Note 3 Wind measurement using DNA205 cup anemometer is required to evaluate the heat stress in outdoor conditions. In that case, DNA205 is mountable on a BVA304 tripod using BVA308 pole. While the Heat Shield base module is fixed to the tripod using the BVA325 arm.

Note 4 Anemometer is required for calculation of PMV-PPD, PHS and IREQ. Hot wire technology (ESV125) offers optimal performances indoors and in low air speed conditions, while a cup anemometer (DNA205) is ideal for outdoor use.

Note 5 GIDAS TEA modules performs in-depth index calculation, data analysis and reporting. Each module includes also a unique "Calculator" feature, to perform sensitivity analysis simulating thermal environments conditions using real measurements or virtual data. See technical specification in the last pages of this document. Read more about it in the LSI-LASTEM's Software catalogue (MW9006).

Heat Shield - WBGT meter

Technical features - MODELS

www.lsi-lastem.com

Heat Shield base module

Heat Shield includes globe temperature, wet bulb temperature, dry bulb temperature and relative humidity and displays on-line WBGT indoor & outdoor index, Heat Index and Humidex. Two models are available, one (ELR610M) with 2" (5 cm) sphere globe temperature sensor the other (ELR615M) with 6" (15 cm) sphere.

ELR610M (1) - ELR615M (2)	Type	Element	Range	Accuracy (0÷60°C)
	Natural Wet Bulb Thermometer (Cotton wick immersed into a built-in reservoir with detachable cover)	1/3 DIN-A Pt100	-20÷60°C	± 0.3°C
	Globe Thermometer ELR610M: 2" sphere ELR615M: 6" sphere	1/3 DIN-A Pt100	-20÷120°C	± 0.3°C
	Dry Bulb Thermometer (Equipped with radiant screen)	1/2 Pt100	-20÷60°C	± 0.8°C ±0.4 °C (10-40°C)
	Relative Humidity Sensor	Capacitive sensing element	0÷100%	1.8 %RH (10-90%)
	ESV125 Air Flow (optional)*	Hot wire (Tungsten wire diam. 9,45 µm)	0.01÷20 m/s	±10 cm/s (0,5÷1,5 m/s) 4% (>1,5 m/s)
	DNA205 Anemometer (optional)* *not supported on satellite units	Cup anemometer for outdoor use	0÷75 m/s	2,5%\

Common features

Calculated parameters	WBGT (indoor) index WBGT (outdoor) index	According to ISO7243 For up to 3 locations simultaneously (Requires Satellite units)
	Head-Torso-Ankle Weighted Average WBGT	According to ISO7243 (Requires Satellite units)
	Heat index	According to 1990 National Weather Service (NWS) Technical Attachment (SR 90-23)
	Humidex	According to J.M. Masterton and F.A. Richardson of Canada's Atmospheric Environment Service equation (1979)
	PMV-PPD	According to ISO7730
	Predicted Heat Strain (PHS)**	According to ISO7933
	Insulation Required (IREQ), Duration Limit of the exposition (Dlim)**	According to ISO11079
	**Requires Air Flow measurement	** via post-processing Software
Data management	Data logging	10" sec÷12hrs; va=1"
	Memory	8MB of flash data memory
	Survey identification	Time and date stamping with clock and calendar
	Software compatibility	HS Manager (included), Gidas TEA (optional)
	Languages	English, Spanish, Portuguese, Italian

Hot wire anemometer

Compliance to ISO7726 standard (STRESS class) excluding omnidirectional feature (300° arc) and the accuracy in the range 0-1 m/s. Air speed is measured every 100 ms, output of the sensor is the average air speed (va) every one second.

Order numb.

ESV125

Air speed	<i>Principle</i>	Hot wire
	<i>Range</i>	0.01 ÷ 20 m/s
	<i>Accuracy</i>	0 ÷ 0.5 m/s = na
	<i>Calibration</i> >0,5 m/s (10 ÷ 30 °C), (1013 hPa)	0,5 ÷ 1.5 m/s = 10 cm >1.5 m/s = 4%
	<i>Output</i>	Average over 1 sec measurements
	<i>Resolution</i>	0,01 m/s
	<i>Response time</i>	10 Hz

Cup anemometer

For wind speed measurement in outdoor applications.

ESV125

Wind speed	<i>Principle</i>	Relay Reed
	<i>Range</i>	0 ÷ 75 m/s
	<i>Accuracy</i>	2,5%
	<i>Threshold</i>	0,5 m/s

Verification probe

Connection to the RS232 port of the Heat Shield base module. It verifies if the measurements coming from the Heat Shield sensors are within the accuracy requirements of the ISO7043 standard. This procedure assesses the whole measurement chain from Heat Shield electronic part, to the sensitive elements (Ta, Tg, Tnw) response.

Order numb.

EST100

Temperature	<i>Principle</i>	Pt100
	<i>Range</i>	0 + 50 °C
	<i>Accuracy</i>	0,01 °C
	<i>Calibration certificate (included)</i>	ACCREDIA (ISO17025)

HS-Heat Shield Manager program is supplied together with each Heat Shield system for the management of the measurements and data evaluation of the thermal risk using the WBGT indoor & outdoor standard. HS downloads the measurements from the Heat Shield base unit and assesses the values including limits, alarm and reports. It is dedicated to the Heat Shield data management, it works in compliance to the configuration chosen as number of measurement points: one or three, or one point including three levels on the same vertical (Head-Torso-Ankle Weighted Average WBGT).

Funzioni principali

- Data downloading using RS232 cable and USB adapter.
- Real time data display from the connected instrument.
- Data browser inside data base. List of surveys as number, data/time start/stop and type are available
- Row data display including environmental data and thermal indexes as they arrive from the Heat Shield system.
- Query on the row data: using different statistical time bases, including min/max values, its occurrence date/time and average within the chosen time base.
- Chart of the WBGT values with clear indication of the limits as given by ISO7243 for acclimates and not acclimates subjects.
- Setup of the subject parameters to perform assessment under ISO7243 and ACGIH standards
- Setup of a free limit to assess the WBGT values using specific requirements.
- Assessment of the limits for each subject. Limits are verified against ISO7243 as “over” or “not over” the threshold, against ACGIH as percentage of admitted work duration time (within n.8 hours) and against the free limit imposed.
- Assessment of the PMV-PPD (ISO7730) as they are downloaded from the Heat Shield system.
- Data export to GIDAS-TEA program for a more complete surveys and data management, including more detailed data assessment and reports.
- Data export to TXT and XML files.
- Reports of the environmental data and indexes. Report are produced in Open Office XML documents (docs). Four document templates are available with possibility to customized them or to create brand new documents template as the user’s needs.

Query on the row data: using different statistical time bases, including min/max values and its occurrence date/time and average within the chosen time base.

Assessment of the limits for each subject. Limits are verified against ISO7243 as “over” or “not over” the threshold, against ACGIH as percentage of admitted work duration time (within n.8 hours) and against the free limit imposed.
